NOTICE

TIA/EIA Engineering Standards and Publications are designed to serve the public interest through eliminating misunderstandings between manufacturers and purchasers, facilitating interchangeability and improvement of products, and assisting the purchaser in selecting and obtaining with minimum delay the proper product for his particular need. Existence of such Standards and Publications shall not in any respect preclude any member or nonmember of TIA/EIA from manufacturing or selling products not conforming to such Standards and Publications, nor shall the existence of such Standards and Publications preclude their voluntary use by those other than TIA/EIA members, whether the standard is to be used either domestically or internationally.

Standards and Publications are adopted by TIA/EIA in accordance with the American National Standards Institute (ANSI) patent policy. By such action, TIA/EIA does not assume any liability to any patent owner, nor does it assume any obligation whatever to parties adopting the Standard or Publication.

Note: The user's attention is called to the possibility that compliance with this document may require use of one or more inventions covered by patent rights. By publication of this standard, Interim Standard, or TSB, no position is taken with respect to the validity of those claims or of any patent rights in connection therewith. The patent holder(s) so far identified have, however, filed statements of willingness to grant licenses under those rights on reasonable and nondiscriminatory terms and conditions to applicants desiring to obtain such licenses. Details may be obtained from the standards developer.

TIA/EIA INTERIM STANDARDS

TIA/EIA Interim Standards contain information deemed to be of technical value to the industry, and are published at the request of the originating Committee without necessarily following the rigorous public review and resolution of comments which is a procedural part of the development of a TIA/EIA Standard.

TIA/EIA Interim Standards should be reviewed on an annual basis by the formulating Committee and a decision made on whether to proceed to develop a TIA/EIA Standard on this subject. TIA/EIA Interim Standards must be cancelled by the Committee and removed from the TIA/EIA Standards Catalog before the end of their third year of existence.

Publication of this TIA/EIA Interim Standard for trial use and comment has been approved by the Telecommunications Industry Association. Distribution of this TIA/EIA Interim Standard for comment shall not continue beyond 36 months from the date of publication. It is expected that following this 36 month period, this TIA/EIA Interim Standard, revised as necessary, will be submitted to the American National Standards Institute for approval as an American National Standard. Suggestions for revision should be directed to: Standards & Technology Department, Telecommunications Industry Association, 2500 Wilson Boulevard, Arlington, VA 22201.

(From Project No. 3-4693-RV2, formulated under the cognizance of the TIA TR-45.5 Subcommittee on Spread Spectrum Digital Technology.)

NOTICE OF DISCLAIMER AND LIMITATION OF LIABILITY

The document to which this Notice is affixed has been prepared by one or more Engineering Committees of the Telecommunications Industry Association (“TIA”). TIA is not the author of the document contents, but publishes and claims copyright to the document pursuant to licenses and permission granted by the authors of the contents.

TIA Engineering Committees are expected to conduct their affairs in accordance with the TIA Engineering Manual (“Manual”), the current and predecessor versions of which are available at http://www.tiaonline.org/standards/sfg/engineering_manual.cfm. TIA’s function is to administer the process, but not the content, of document preparation in accordance with the Manual and, when appropriate, the policies and procedures of the American National Standards Institute (“ANSI”).

THE USE OR PRACTICE OF CONTENTS OF THIS DOCUMENT MAY INVOLVE THE USE OF INTELLECTUAL PROPERTY RIGHTS (“IPR”), INCLUDING PENDING OR ISSUED PATENTS, OR COPYRIGHTS, OWNED BY ONE OR MORE PARTIES. TIA MAKES NO SEARCH OR INVESTIGATION FOR IPR. WHEN IPR CONSISTING OF PATENTS AND PUBLISHED PATENT APPLICATIONS ARE CLAIMED AND CALLED TO TIA’S ATTENTION, A STATEMENT FROM THE HOLDER THEREOF IS REQUESTED, ALL IN ACCORDANCE WITH THE MANUAL. TIA TAKES NO POSITION WITH REFERENCE TO, AND DISCLAIMS ANY OBLIGATION TO INVESTIGATE OR INQUIRE INTO, THE SCOPE OR VALIDITY OF ANY CLAIMS OF IPR.

ALL WARRANTIES, EXPRESS OR IMPLIED, ARE DISCLAIMED, INCLUDING WITHOUT LIMITATION, ANY AND ALL WARRANTIES CONCERNING THE ACCURACY OF THE CONTENTS, ITS FITNESS OR APPROPRIATENESS FOR A PARTICULAR PURPOSE OR USE, ITS MERCHANTABILITY AND ITS NON-INFRINGEMENT OF ANY THIRD PARTY’S INTELLECTUAL PROPERTY RIGHTS. TIA EXPRESSLY DISCLAIMS ANY AND ALL RESPONSIBILITIES FOR THE ACCURACY OF THE CONTENTS AND MAKES NO REPRESENTATIONS OR WARRANTIES REGARDING THE CONTENT’S COMPLIANCE WITH ANY APPLICABLE STATUTE, RULE OR REGULATION.

TIA SHALL NOT BE LIABLE FOR ANY AND ALL DAMAGES, DIRECT OR INDIRECT, ARISING FROM OR RELATING TO ANY USE OF THE CONTENTS CONTAINED HEREIN, INCLUDING WITHOUT LIMITATION ANY AND ALL INDIRECT, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES (INCLUDING DAMAGES FOR LOSS OF BUSINESS, LOSS OF PROFITS, LITIGATION, OR THE LIKE), WHETHER BASED UPON BREACH OF CONTRACT, BREACH OF WARRANTY, TORT (INCLUDING NEGLIGENCE), PRODUCT LIABILITY OR OTHERWISE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. THE FOREGOING NEGATION OF DAMAGES IS A FUNDAMENTAL ELEMENT OF THE USE OF THE CONTENTS HEREOF, AND THESE CONTENTS WOULD NOT BE PUBLISHED BY TIA WITHOUT SUCH LIMITATIONS.

1 OVERVIEW

1.1 The cdma2000 Family of Standards

The cdma2000 family of standards includes core air interface, minimum performance, and service standards (see 1.3). The cdma2000 air interface standards specify a spread spectrum radio interface that uses Code Division Multiple Access (CDMA) technology to meet the requirements for Third Generation (3G) wireless communication systems. The core air interface standards in the family are [1, 2, 3, 4, 5]. In addition, the family includes a standard [6] that specifies analog operation, to support dual-mode mobile stations and base stations.

Throughout the remainder of this document, use of the term cdma2000 refers to the cdma2000 family .

1.1.1 Purpose

The technical requirements contained in cdma2000 form a compatibility standard for CDMA systems. They ensure that a mobile station can obtain service in a system manufactured in accordance with the cdma2000 standards. The requirements do not address the quality or reliability of that service, nor do they cover equipment performance or measurement procedures.

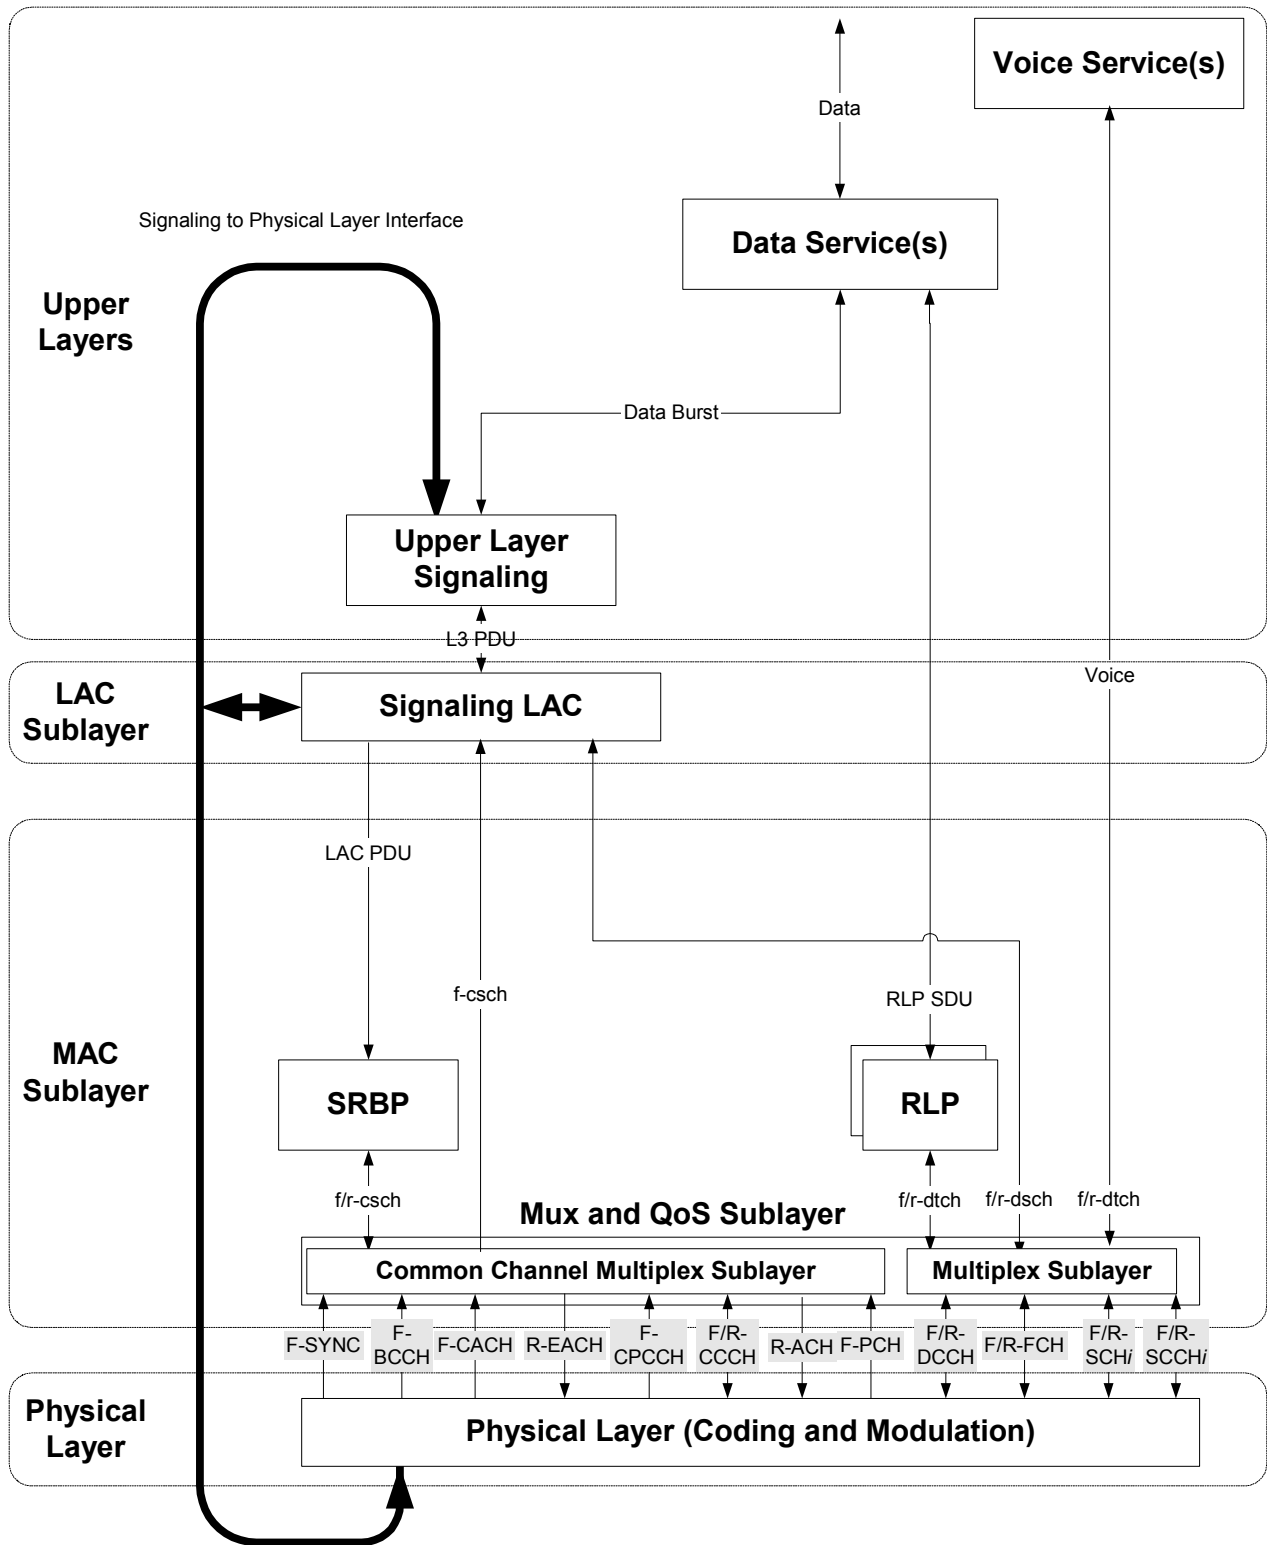

Compatibility, as used in connection with cdma2000, is understood to mean: any cdma2000 mobile station is able to place and receive calls in cdma2000 or IS-95 systems. Conversely, any cdma2000 system is able to place and receive calls for cdma2000 and IS-95 mobile stations. In a subscriber's home system, all call placement is automatic. Similarly, it is preferable for call placement to be automatic when a mobile station is roaming.

To ensure compatibility, both radio system parameters and call processing procedures are specified. The sequence of call processing steps that the mobile stations and base stations execute to establish calls is specified, along with the digital control messages and, for dual-mode systems, the analog signals that are exchanged between the two stations.

The base station is subject to different compatibility requirements than the mobile station. Radiated power levels, both desired and undesired, are fully specified for mobile stations, in order to control the RF interference that one mobile station can cause another. Base stations are fixed in location and their interference is controlled by proper layout and operation of the system in which the station operates. Detailed call processing procedures are specified for mobile stations to ensure a uniform response to all base stations. Base station procedures which do not affect the mobile stations' operation are left to the designers of the overall land system. This approach to writing the compatibility specification is intended to provide the land system designer with sufficient flexibility to respond to local service needs and to account for local topography and propagation conditions.

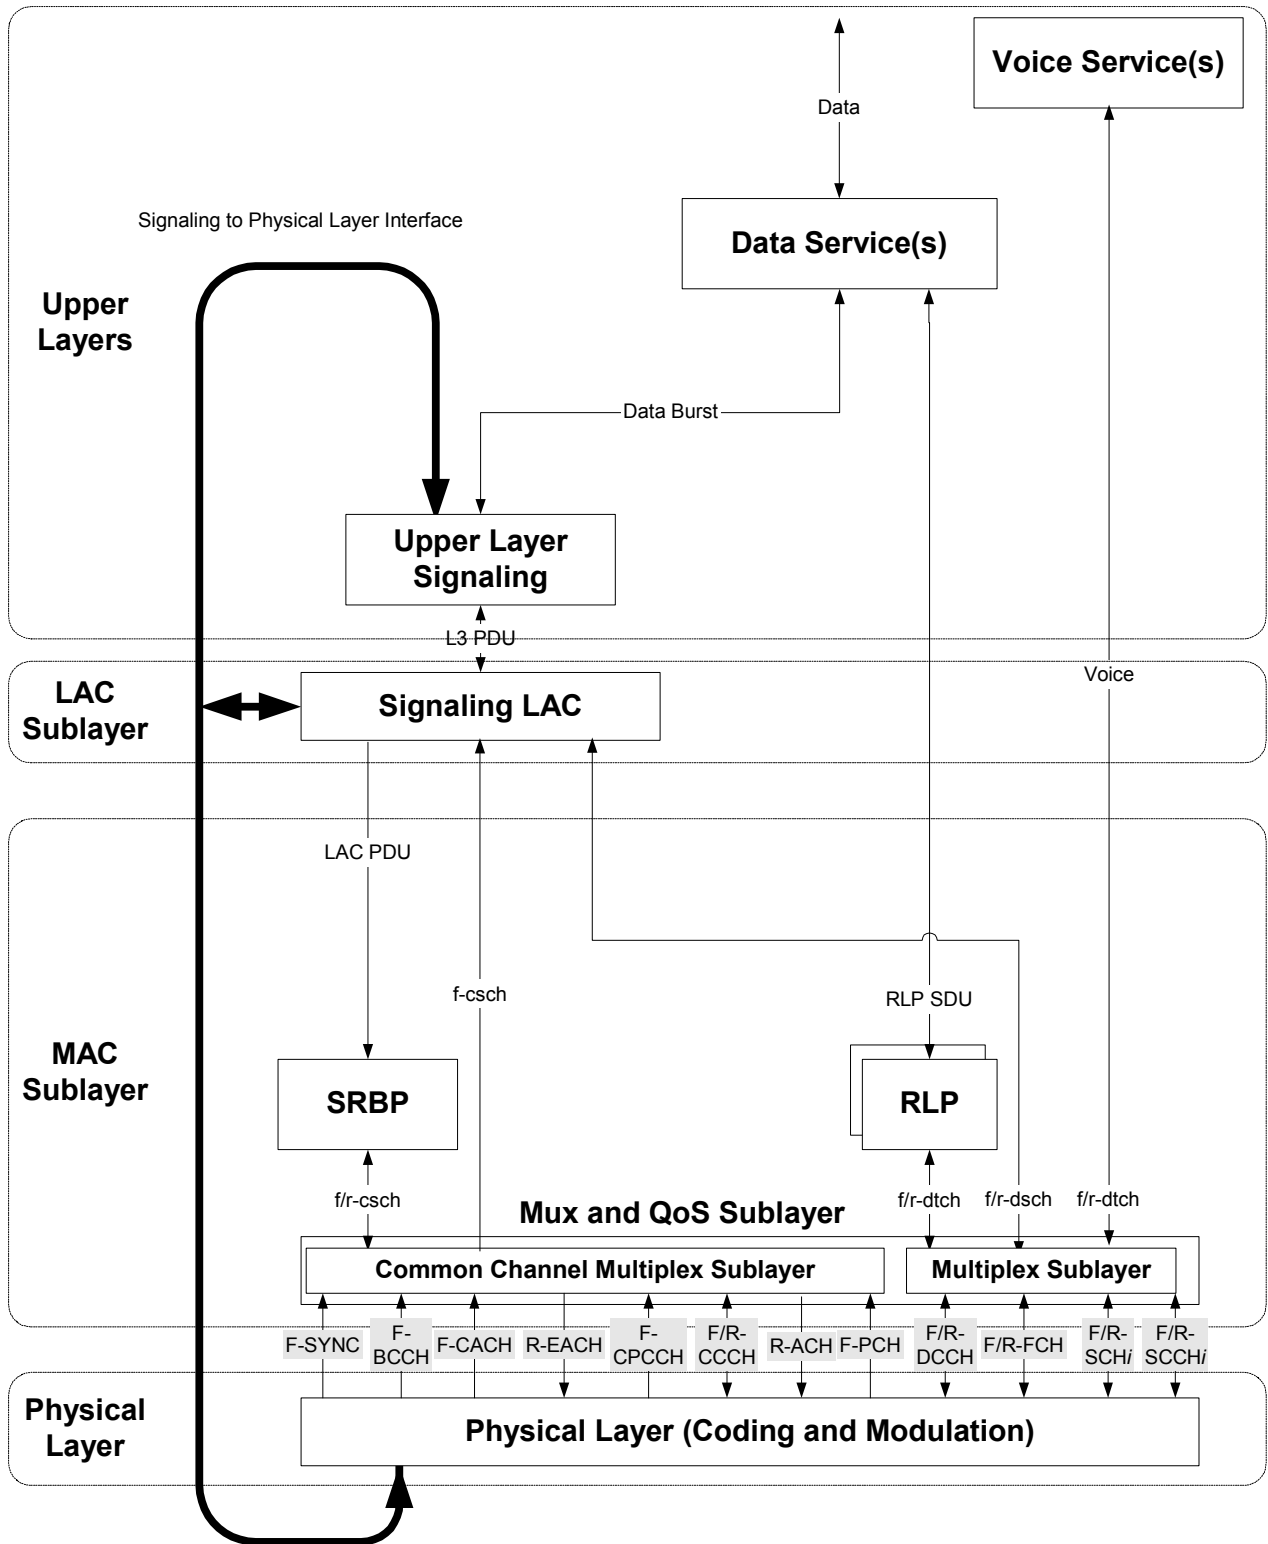

cdma2000 includes provisions for future service additions and expansion of system capabilities. This release of the cdma2000 family of standards supports Spreading Rate 1 and Spreading Rate 3 operation (see [2]).

1 1.1.2 Architecture

- 1 Figure 1 depicts the general architecture of cdma2000. Development of the cdma2000
- 2 family of standards has, to the greatest extent possible, adhered to the architecture by
- 3 specifying different layers in different standards.
- 4 The physical layer is specified in [2], the MAC in [3], the LAC in [4], and upper layer
- 5 signaling in [5].

Figure 1. cdma2000 Architecture

1.2 Relationship to TIA/EIA-95-B

cdma2000 provides full backward compatibility with TIA/EIA-95-B. Backward compatibility permits cdma2000 infrastructure to support TIA/EIA-95-B mobile stations and permits cdma2000 mobile stations to operate in TIA/EIA-95-B systems.

The cdma2000 family also supports reuse of existing TIA/EIA-95-B service standards, such as those that define speech services, data services, Short Message Services, and Over the Air Provisioning and Activation services, with the cdma2000 physical layer.

cdma2000 supports handoff of voice and data calls and other services from a TIA/EIA-95-B system to a cdma2000 system:

- At a handoff boundary and within a single frequency band,
- At a handoff boundary and between frequency bands (assuming the mobile station has multi-band capability),
- Within the same cell footprint and within a single frequency band, and
- Within the same cell footprint and between frequency bands (assuming the mobile station has multi-band capability).

cdma2000 supports handoff of voice and data calls and other services¹ from a cdma2000 system to a TIA/EIA-95-B system:

- At a handoff boundary and within a single frequency band,
- At a handoff boundary and between frequency bands (assuming the mobile station has multi-band capability),
- Within the same cell footprint and within a single frequency band, and
- Within the same cell footprint and between frequency bands (assuming the mobile station has multi-band capability).

1.3 cdma2000 References

16 **1.5 Support of Multiple Band Classes**

17 The cdma2000 family of standards supports operation in all the band classes defined in [2].
18 Signaling support is provided to enable transitions between band classes (e.g., handoffs,
19 service redirections) for mobile stations that are capable of operating in multiple band
20 classes.

21

22

3

2 COMMON ASPECTS

2.1 Verbal Forms

The following verbal forms are used in all cdma2000 standards. “Shall” and “shall not” identify requirements to be followed strictly to conform to the standard and from which no deviation is permitted. “Should” and “should not” indicate that one of several possibilities is recommended as particularly suitable, without mentioning or excluding others; that a certain course of action is preferred but not necessarily required; or (in the negative form) that a certain possibility or course of action is discouraged but not prohibited. “May” and “need not” indicate a course of action permissible within the limits of the standard. “Can” and “cannot” are used for statements of possibility and capability, whether material, physical, or causal.

2.2 Channel Naming Conventions

Many cdma2000 standards refer to logical channels, physical channels, or both. The following naming conventions apply to all cdma2000 standards.

2.2.1 Logical Channel Naming Convention

A logical channel name consists of three lower case letters followed by "ch" (channel). A hyphen is used after the first letter. Table 1 shows the naming conventions for the logical channels that are used in this family of standards.

Table 1. Naming Conventions for Logical Channels

First Letter	Second Letter	Third letter
f = Forward	d = Dedicated	t = Traffic
r = Reverse	c = Common	s = Signaling

For example, the logical channel name for the Forward Dedicated Traffic Channel is f-dtch.

2.2.2 Physical Channel Naming Convention

Physical channels are represented by upper case abbreviations. As in the case of logical channels, the first letters in the names of the channels indicate the direction of the channel (i.e., forward or reverse) and is followed by a hyphen. Table 2 shows the names and meanings of all the physical channels designated in cdma2000.

Table 2. Physical Channel Names

Channel Name ¹	Physical Channel
F/R-FCH	Forward/Reverse Fundamental Channel
F/R-DCCCH	Forward/Reverse Dedicated Control Channel
F/R-SCCH	Forward/Reverse Supplemental Code Channel

F/R-SCH	Forward/Reverse Supplemental Channel
F-PCH	Paging Channel
F-QPCH	Quick Paging Channel
R-ACH	Access Channel
F/R-CCCH	Forward/Reverse Common Control Channel
F/R-PICH	Forward/Reverse Pilot Channel
F-APICH	Dedicated Auxiliary Pilot Channel
F-TDPICH	Transmit Diversity Pilot Channel
F-ATDPICH	Auxiliary Transmit Diversity Pilot Channel
F-SYNCH	Sync Channel
F-CPCCH	Common Power Control Channel
F-CACH	Common Assignment Channel
R-EACH	Enhanced Access Channel
F-BCCH	Broadcast Control Channel
<p>1 The notations “F/R” and “Forward/Reverse” represent two different physical channels (i.e., one forward channel and one reverse channel)</p>	

1

2 For example, the physical channel name for the Forward Fundamental Channel is F-FCH.

3 **2.3 Definitions of Terms**

4 Each cdma2000 volume contains a definition of terms proper to that volume. An attempt
5 has been made to use the same definitions for the same terms across the family of volumes.

6 **2.4 Constants**

7 Table 3 lists the constants defined in various cdma2000 volumes and identifies the
8 standard in which the constant is defined.
